No 911 Outages	No 911 Outages	No 911 Outages

**911 Outages/Remote/Community Isolations:**

- None reported

**Service Interruptions:**

- None reported

# **WEATHER OF CONCERN**

## **NORTHERN CALIFORNIA**

- An active weather pattern ahead with multiple chances for precipitation this week. The most impactful period will likely be Friday through Sunday as a pair of Pacific systems move through the region. By the end of the week and into the weekend wetter and colder storms will affect northern California.
  - Over an inch of rain is expected in the Valley with several feet of snow over the high Sierra.
  - Several inches of snow are expected to fall over the trans-Sierra passes Friday afternoon and evening.
  - On Saturday and Sunday snow levels will fall to around 3,500 to 4,000 feet with snow continuing to accumulate through Sunday night.
  - Snow levels at, and below pass level, will likely lead to mountain travel delays and chain controls.

## **SOUTHERN CALIFORNIA**

- Multiple storms will likely impact Southwest California later this week into the early next week.
- The first storm is expected to bring between 0.25 to 1.00 inches of rain to the region on Thursday, and rain rates are likely to remain below 0.30 inches per hour.
- The next storm will arrive Friday through Saturday.
  - This storm Pacific system will have good southerly flow and a subtropical moisture tap, with the potential for heavier rain rates and higher storm totals.
  - Rainfall amounts of 2 to 3 inches will be possible, with significant snowfall at resort level.
- The third system Sunday into Monday will have little available moisture, and is likely to maintain cooler conditions with light showers through the period.
- Some possible impacts are mud and debris flow concerns near recent burn areas and mud and rockslides in non-burn areas in or below steep terrain, along with roadway flooding.

### **Weather Advisories, Watches, and Warnings currently active in California:**

### **Active Weather Warnings, Watches and Advisories by County:**

- <http://www.wrh.noaa.gov/hazardSummary/?state=ca&bycounty=1>

# **KEY POINTS**

## **01/29/19 – 02/04/19**

### **Tuesday-Wednesday**

- No significant weather impacts are expected across California.
- Light precipitation is possible both days.

### **Wednesday Night-Thursday**

- The first in a series of storm systems will likely bring a quick shot of rain to central and southern California.
- There is a slight chance of thunderstorms across southern California on Thursday afternoon.

### **Friday-Monday**

- A much larger storm system will bring widespread valley rain and mountain snow to the state. Confidence in details is still low, but flash flooding and mountain snowfall travel impacts are both possible.
- Saturday will likely be the day with the heaviest precipitation, with widespread precipitation potentially continuing Sunday. Showers may linger as late as Monday in some locations.

# California Weather Impacts

01/29/19 - 02/04/19
